

Rotterdam, January 12th 2017

Hi,

Please feel free to enjoy these Mark's Lens Safe rings to guard the release button of your camera. This system is by no means fail-proof but it will make it a lot harder for thieves to sneakily remove lenses from your camera.

The devices have not been tested for damage they might do to camera or other photographic equipment. Any use is, therefore, completely at user's risk.

The Lens Safe rings are an open-source hardware project by Rutger Geerling (concept) and Mark Riemersma (design) – these designs can be freely modified, distributed and used.

To attach these rings, please use thin double sided tape and attach carefully.

If you have useful modifications, please feel free to email those to info@fotograferen.net so they might be included for future use.

Kind regards,

Rutger Geerling
